

TobiasBelch

LEAD HEALTHCARE PRODUCT ENGINEER

[linkedin.com/in/tobias-belch](https://www.linkedin.com/in/tobias-belch) | Berlin, Germany

about

Lead product engineer with 17 years of hands-on fullstack delivery and a track record of owning the messy middle between product, architecture, and execution. Brings founding-team range: shaping ambiguous requirements, building durable TypeScript/React/Node systems, aligning stakeholders, mentoring engineers, and establishing repeatable engineering practices. Experience spans healthcare platforms, physician tooling, hospital operations, and data-driven decision-support software. Currently focused on design-system and AI-agent initiatives that improve reliability, UX consistency, and engineering leverage.

skills

Product Engineering

TypeScript / JavaScript
React.js / Next.js
Node.js / NestJS
BFF Architecture
REST / GraphQL APIs
Design Systems

Healthcare & AI

Regulated e-health Products
Physician Tooling
Hospital Operations
AI Agent Orchestration
LLM Integration
D3 / Data Visualisation

Leadership

Architecture Ownership
Technical Leadership
Requirements Refinement
Stakeholder Communication
Hiring / Mentoring
Testing / Accessibility

work experience

Senior Software Engineer – DocMorris

Berlin, Germany | 08/2023 – Present

Digital healthcare and online pharmacy platform in the German market.

- Architected and delivered a white-label migration of the pharmacy platform, onboarding 3 brands while preserving a shared component and configuration architecture.
- Drive frontend and BFF architecture across TypeScript, React, Next.js, and Node.js, shaping technical direction for healthcare product surfaces used in the German market.
- Lead design-system work to improve UX consistency, accessibility, and developer velocity across product teams; structured the system to support AI-assisted UI generation.
- Drive AI-agent initiatives across the engineering organisation, focusing on token usage, reliability, response predictability, and practical adoption in engineering workflows.
- Trusted for stakeholder communication in high-visibility situations; mentor 5 engineers in TypeScript, React architecture, testing, and delivery quality.

work experience

Head of Engineering – Made2Flow

Berlin, Germany | 12/2022 – 07/2023

Data platform for sustainability analytics and decision support.

- Redesigned the core domain data model from scratch with the CPO, replacing a fragmented model that could not support target product use cases.
- Built and led a team of 4 engineers, including hiring 2, while owning technical partner communication and integration planning.
- Operated across product, architecture, data modelling, delivery, and team-building responsibilities.

Technical Lead – eHealth-Tec GmbH

Berlin, Germany | 04/2020 – 11/2022

Regulated digital health products for patients, doctors, and pharmacists.

- Built and owned the frontend of a white-label online pharmacy platform serving 2 production clients using TypeScript, React, and Next.js.
- Designed Backend-for-Frontend layers as anti-corruption boundaries, reducing frontend exposure to upstream service complexity across Node.js, NestJS, REST, and GraphQL.
- Delivered a gematik-regulated browser-based e-prescription tool for physicians, applying security-by-design in a regulated, mission-critical healthcare context.
- Introduced ADRs, design reviews, and structured refinement, replacing ad-hoc technical decisions with a repeatable architecture process.
- Led cross-functional alignment for a team of 4 and mentored engineers in TypeScript, architecture, testing, and healthcare product delivery.

Head of Engineering – Medtower UG

Berlin, Germany | 09/2018 – 04/2020

Hospital operations software for real-time visibility, device tracking, and operational awareness.

- Architected and delivered a real-time hospital operations platform with microservices, React/TypeScript SPA, live device tracking, and sensor-data dashboards.
- Built 3D indoor multi-floor maps with live device location, status, and sensor-feed visualisation in an offline-capable hospital environment.
- Designed a multi-device communication system connecting IoT hardware, server infrastructure, and browser clients using AMQP 1.0 and Apache Qpid.
- Managed external Apache NiFi consultants for ETL pipeline delivery; integrated pipeline outputs into the dashboard layer.
- Led a team of 2 engineers; established requirements engineering, refinement process, and knowledge base.

earlier experience

Software Developer – remind me GmbH

02/2018 – 08/2018

Authored the technical concept for the white-label product transformation — adopted and shipped after tenure. Implemented feature-toggle architecture with lazy loading for flexible multi-context deployment. Mentored junior and mid-level developers in a Kanban team of 5.

earlier experience

Software Developer – Cedavis Technology GmbH

08/2009 – 01/2018

Grew into sole frontend architecture ownership over 9 years, introducing Angular 1 and later migrating the stack to React and TypeScript. Built a custom D3 chart component library for healthcare capacity-planning dashboards. Delivered data simulation and forecasting visualisation features for operational decision support in healthcare institutions. Engineered shared React rendering for live UI and PDF reports, reducing duplication between interactive and reporting surfaces.

languages

German (Native) · English (CEFR C-level)

education

Berlin University of Applied Sciences (BHT)

2007 – 2011

Bachelor of Science, Computer Science

certifications

iSAQB Certified Professional for Software Architecture – Foundation

05/2022

oode

Domain Driven Design
