

TobiasBelch

ENGINEERING MANAGER

[linkedin.com/in/tobias-belch](https://www.linkedin.com/in/tobias-belch) | Berlin, Germany

about

Technical leader with 17 years delivering complex, multi-layered software platforms across healthcare, e-health commerce, and sustainability. Leads cross-functional squads building user-facing agentic products powered by LLMs and AI agents at the core. Combines strategic engineering leadership with hands-on expertise in TypeScript, React, and Node.js, and a proven track record driving AI agent initiatives — from research and token optimisation. Builds and mentors engineering teams, owns stakeholder communication in high-visibility situations, and raises collective delivery velocity in fast-moving, product-driven environments.

education

Berlin University of Applied Sciences (BHT)

2007 – 2011

Bachelor of Science, Computer Science

work experience

Senior Software Engineer – DocMorris

Berlin, Germany | 08/2023 – Present

€900M+ digital healthcare platform. Drives AI agent initiatives and leads cross-team engineering strategy.

- Led AI agent initiatives across the engineering org — researched and optimised token usage, reliability, and response predictability for production LLM-powered features; drove provider evaluation and cost/quality trade-off decisions.
- Designed and led a cross-platform Design System explicitly structured for AI-assisted UI generation, enabling rapid, LLM-driven component creation at scale.
- Architected a white-label platform migration with 3 brands onboarded; drove frontend and BFF architecture evolution across the full stack.
- Acted as trusted escalation point for cross-functional stakeholder communication in critical, high-visibility situations involving product, operations, and external partners.
- Mentored 5 engineers, onboarded new hires, and raised team-wide capability in TypeScript, React, AI-adjacent practices, and testing.
- Improved test coverage and accessibility compliance across the frontend codebase, reducing regression risk and raising quality bar.

Head of Engineering – Made2Flow

Berlin, Germany | 12/2022 – 07/2023

Seed-stage sustainability platform for fashion supply-chain decision support.

- Built and led a cross-functional team of 4 engineers, including hiring 2; established engineering processes, code review practices, and delivery cadence from the ground up.
- Designed a next-generation domain data model with the CPO, replacing a fragmented model that constrained product use cases and data-intensive decision-support features.
- Owned technical partner communication and integration planning, ensuring alignment across external stakeholders in a fast-moving startup environment.

Technical Lead – eHealth-Tec GmbH

Berlin, Germany | 04/2020 – 11/2022

Digital health products for patients, doctors, and pharmacists. Later acquired by DocMorris.

- Built and owned the frontend of a white-label online pharmacy platform serving 2 clients in production (TypeScript, React, Next.js).
- Designed Backend-for-Frontend layers as anti-corruption boundaries, enabling clean domain separation and scalable API contracts (Node.js, NestJS).
- Introduced a requirements-driven architecture process — replaced ad-hoc design with ADRs, design reviews, and structured refinement across the team of 4.
- Led stakeholder communication and cross-functional alignment in a Scrum-lite setup, bridging product, engineering, and external partners.
- Mentored and onboarded engineers, growing team capability in TypeScript, architecture, and testing practices.
- Delivered a gematik-regulated browser-based e-prescription tool for physicians, navigating strict regulatory and data privacy requirements.

work experience

Head of Engineering – Medtower UG

Berlin, Germany | 09/2018 – 04/2020

Software and hardware solutions for hospital operations and real-time visibility.

- Owned architecture and delivery of a real-time IoT platform — microservices, SPA, and live device tracking (Node.js, React, TypeScript).
- Designed a multi-device real-time communication system (IoT hardware, server, web browser) using AMQP 1.0 and Apache Qpid.
- Built 3D indoor multi-floor maps with live device location and status visualisation in an offline environment (OpenMapTiles).
- Led a team of 2 engineers, established requirements engineering, refinement processes, and a team knowledge base.
- Managed external Apache NiFi consultants for ETL pipeline delivery, balancing internal and external resourcing.

earlier experience

Software Developer – remind me GmbH

02/2018 – 08/2018

Authored the technical concept for a white-label product transformation — adopted and shipped after tenure. Implemented feature-toggle architecture with lazy loading for flexible multi-context deployment. Mentored junior and mid-level developers in a Kanban team of 5.

Software Developer – Cedavis Technology GmbH

08/2009 – 01/2018

Evolved sole ownership of frontend architecture over 9 years — introduced Angular 1, then migrated to React and TypeScript. Built a custom D3 chart component library from scratch. Engineered a PDF reporting module using Java Nashorn to render React components server-side, enabling a single shared codebase for live UI and PDF output. Implemented data simulation and forecasting features for healthcare capacity planning.

certifications

iSAQB Certified Professional for Software Architecture – Foundation

05/2022
