

TobiasBelch

SENIOR FULLSTACK ENGINEER

[linkedin.com/in/tobias-belch](https://www.linkedin.com/in/tobias-belch) | Berlin, Germany

about

Fullstack engineer with 17 years delivering web platforms and operational dashboards — frontend-heavy with solid backend depth. Combines architecture ownership with hands-on TypeScript, React, and Node.js execution across client, BFF, and service layers. Track record delivering complex data visualisation (D3, live device tracking, sensor feeds) and integrating streaming data sources into user-facing applications. Consistently sought out as a technical reference point — mentors engineers and owns delivery across interdisciplinary teams.

skills

Core

TypeScript / JavaScript
React.js / Next.js
Node.js (TypeScript)
Frontend Architecture
Technical Leadership
Mentoring

Strong

REST / GraphQL
Microservices / BFF Pattern
Jest / Cypress / Playwright
Docker / CI/CD
Redux / State Mgmt

Supporting

Real-Time Data Visualisation
D3.js / Canvas / SVG
WebSockets / Streaming APIs
Security-by-Design
NestJS
AMQP / Apache NiFi
LLM / AI Agent Integration

work experience

Senior Software Engineer – DocMorris

Berlin, Germany | 08/2023 – Present

- Large-scale digital healthcare platform; TypeScript/React/Node.js fullstack stack serving the German market.
- Architected and delivered a white-label migration of the pharmacy frontend; 3 brands onboarded to production, each with isolated configuration and shared component layer.
 - Drove BFF and frontend architecture evolution — defined API contracts, streaming integration patterns, and data-flow design across client and service layers.
 - Designed and led implementation of a cross-platform Design System, enabling consistent UI delivery across multiple product surfaces.
 - Improved test coverage (unit, integration, end-to-end) and accessibility compliance across the frontend codebase.
 - Mentored 5 engineers; raised team capability in TypeScript, React architecture, and testing practices.

work experience

Head of Engineering – Made2Flow

Berlin, Germany | 12/2022 – 07/2023

Supply-chain data platform — sustainability analytics and decision support.

- Redesigned the core domain data model from scratch with the CPO, replacing a fragmented model insufficient for product use cases; drove data pipeline integration planning.
- Built and led a team of 4 engineers, including hiring 2; owned technical partner communication.

Technical Lead – eHealth-Tec GmbH

Berlin, Germany | 04/2020 – 11/2022

Digital health products for patients, doctors, and pharmacists — regulated environment.

- Built and owned the frontend of a white-label online pharmacy platform serving 2 production clients (TypeScript, React, Next.js).
- Designed and implemented Backend-for-Frontend layers as anti-corruption boundaries, decoupling frontend from upstream service complexity (Node.js, NestJS, REST/GraphQL).
- Delivered a gematik-regulated browser-based e-prescription tool for physicians — security-by-design in a highly regulated, mission-critical context.
- Introduced architecture decision records (ADRs), design reviews, and structured refinement — replacing ad-hoc design with a repeatable process.
- Led cross-functional alignment for a team of 4; mentored and onboarded engineers in TypeScript, architecture, and testing.

Head of Engineering – Medtower UG

Berlin, Germany | 09/2018 – 04/2020

Real-time IoT platform for hospital operations — live device tracking and situational visibility.

- Architected and delivered a real-time situational awareness platform: microservices backend, React/TypeScript SPA, and live sensor data dashboard (Node.js, AMQP 1.0).
- Built 3D indoor multi-floor maps with live device location, status, and sensor feed visualisation in an offline-capable environment (OpenMapTiles, custom D3 components).
- Designed a multi-device real-time communication system (IoT hardware → server → browser) using AMQP 1.0 and Apache Qpid — low-latency streaming under operational constraints.
- Managed external Apache NiFi consultants for ETL pipeline delivery; integrated pipeline outputs into the dashboard layer.
- Led a team of 2 engineers; established requirements engineering, refinement process, and knowledge base.

earlier experience

Software Developer – remind me GmbH

02/2018 – 08/2018

Authored the technical concept for the white-label product transformation — adopted and shipped after tenure. Implemented feature-toggle architecture with lazy loading for flexible multi-context deployment. Mentored junior and mid-level developers in a Kanban team of 5.

Software Developer – Cedavis Technology GmbH

08/2009 – 01/2018

Grew sole ownership of frontend architecture over 9 years — introduced Angular 1, then migrated to React and TypeScript as the stack matured. Built a custom D3 chart component library from scratch for healthcare capacity planning dashboards. Engineered a PDF reporting module using Java Nashorn to render React components server-side — single shared codebase for live UI and PDF output. Delivered data simulation and forecasting visualisation features for operational decision support.

languages

German (Native) · English (CEFR C-level)

education

Berlin University of Applied Sciences (BHT)

2007 – 2011

Bachelor of Science, Computer Science

certifications

iSAQB Certified Professional for Software Architecture – Foundation

05/2022

oose

Domain Driven Design
