

TobiasBelch

HEAD OF ENGINEERING

[linkedin.com/in/tobias-belch](https://www.linkedin.com/in/tobias-belch) | Berlin, Germany

about

Head of Engineering with 17 years across healthcare, e-health, and sustainability platforms. Two tenures as Head of Engineering — built and led teams, defined technical strategy, and delivered platform transformations that directly unlocked business growth. Combines deep architecture ownership with team building, hiring, mentoring, and cross-functional leadership. Drives Design System initiatives and AI agent integration at scale. Consistently sought out as a technical reference point and stakeholder communicator in high-visibility situations. Seeking Head of Engineering roles leading teams of 5–15 engineers in product-driven organisations.

skills

Leadership	Architecture & Platform	Technology & Methods
Engineering Management	Frontend Architecture	TypeScript / JavaScript / Node.js
Team Building & Hiring	Distributed Systems & BFF	React / Next.js
Technical Strategy & Roadmap	White-Label / Multi-Tenant	LLM Integration / AI
Mentoring & Career	IoT & Real-Time Systems	Orchestration
Development	Design Systems & Component	DDD / ADR / Refinement
Stakeholder Communication	Libraries	Processes
Cross-Functional Alignment	API Design (GraphQL, REST)	Docker / Git / CI/CD
		NestJS / D3 / AMQP / Java

languages

German (Native) · English (CEFR C-level)

education

Berlin University of Applied Sciences (BHT)	2007 – 2011
Bachelor of Science, Computer Science	

work experience

Senior Software Engineer – DocMorris

Berlin, Germany | 08/2023 – Present

Digital healthcare and online pharmacy platform for the German market.

- Led white-label monolith-to-multi-tenant migration. Onboarded 3 brands across 11M active users with ~90% code reuse; second tenant launched in 2 months vs. an estimated 2 years without the white-label architecture — a ~92% time reduction. Refactoring improved testability and maintainability over the original monolith.
- Mentored 5 of 15 engineers through a structured program of 1:1s, pair programming, and weekly education sessions. One bootcamp-graduate engineer promoted to mid-level within 2 years and to senior within 4 — an estimated 2-year acceleration vs. industry average.
- Established LLM agent patterns for product creation workflows — piloted within own team, then packaged and handed to 3 additional teams. Improved response predictability and achieved an estimated 30x token-cost reduction on knowledge-retrieval tasks, with schema-validated outputs approaching deterministic reliability.
- Designed and led implementation of a cross-platform Design System (~30–40 components), structured from day one to enable AI-assisted UI generation. Projected to halve design time, eliminate handover overhead, and reduce implementation effort by an estimated 80% through AI-powered component assembly.
- Drove frontend and BFF architecture evolution, shaping technical direction across the stack.
- Trusted for stakeholder communication in critical and high-visibility situations.

Head of Engineering – Made2Flow

Berlin, Germany | 12/2022 – 07/2023

Sustainability platform for fashion supply-chain decision support. Pre-revenue start-up.

- Co-designed a next-generation domain data model with the CPO, replacing an MVP-stage model that blocked ~30 business cases. Delivered the redesign in 6 months alongside other responsibilities, directly unblocking several client deals that were pending the transformation.
- Built and led a team of 4 engineers, hiring 2 within 2 months — including one of the strongest engineers I've worked with, who remains a key contributor. Established domain documentation and refinement processes that closed a gap between business goals and implementation, eliminating recurring friction.
- Owned technical partner communication and integration planning with external data providers and platform customers.

Technical Lead – eHealth-Tec GmbH

Berlin, Germany | 04/2020 – 11/2022

Digital health products for patients, doctors, and pharmacists.

- Replaced ad-hoc architecture decisions — where proposals were lost and arbitrary shifts caused chaos — with a structured ADR and design review process (~15–20 ADRs). Accelerated decision-making, improved codebase stability and maintainability, and reduced onboarding time for new engineers. Process still active 5 years on.
- Architected BFF layers insulating the frontend (~11M users) from restructuring across ~20 backend services. Eliminated ripple-effect changes on the frontend whenever backend services were migrated or replaced, and provided the architectural seam for later white-label tenant differentiation.
- Built and owned the frontend of a white-label online pharmacy platform serving 2 clients in production (TypeScript, React, Next.js).
- Led stakeholder communication and cross-functional alignment for a team of 4 in a Scrum-lite setup.
- Mentored and onboarded engineers; grew team capability in TypeScript, architecture, and testing.

work experience

Head of Engineering – Medtower UG

Berlin, Germany | 09/2018 – 04/2020

Software and hardware solutions for hospital operations and visibility.

- Architected a real-time distributed communication system using AMQP 1.0 / Apache Qpid where IoT hardware, servers, and web browsers operated as peers via pub/sub — eliminating point-to-point integration complexity in a hospital environment where uptime and reliability were critical.
- Built 3D indoor multi-floor maps with live device location for hospital equipment tracking (beds, wheelchairs, devices), including indoor navigation and reporting views. Entire system operated in an offline hospital intranet — no internet access — requiring fully self-contained tile serving and real-time updates.
- Managed an external Apache NiFi consultant for client-specific ETL pipelines. Within 2 weeks of engagement, the output enabled the team to build business cases — demonstrating rapid time-to-value from the ETL infrastructure.
- Owned architecture and development of a real-time IoT platform — microservices, SPA, and live device tracking (Node.js, React, TypeScript).
- Led a team of 2 engineers; established requirements engineering, refinement process, and team knowledge base.

earlier experience

Software Developer – remind me GmbH

02/2018 – 08/2018

Authored the technical concept for the white-label product transformation — adopted and shipped after tenure. Implemented feature-toggle architecture with lazy loading for flexible multi-context deployment. Mentored junior and mid-level developers in a Kanban team of 5.

Software Developer – Cedavis Technology GmbH

08/2009 – 01/2018

Evolved sole ownership of frontend architecture over 9 years — introduced Angular 1, then migrated to React and TypeScript as the stack matured. Built a custom D3 chart component library from scratch. Engineered a PDF reporting module using Java Nashorn to render React components server-side — enabling a single shared codebase for live UI and PDF output.
