

TobiasBelch

LEAD FULLSTACK ENGINEER

[linkedin.com/in/tobias-belch](https://www.linkedin.com/in/tobias-belch) | Berlin, Germany

about

Lead fullstack engineer with 17 years delivering scalable web platforms across healthcare, e-health, and sustainability — with the last year focused on integrating LLMs and AI agents into production health-tech systems. Combines deep full-stack delivery (TypeScript, React, Next.js, Node.js) with architecture ownership, Design System design, and AI integration spanning agent orchestration, prompt engineering, and token optimisation. Operates comfortably across the entire stack — from API design and data modelling to frontend architecture and stakeholder communication. Consistently sought out as a technical reference point across teams and trusted to mentor engineers and raise collective delivery quality.

skills

Fullstack	AI & Data	Leadership & Domain
TypeScript / JavaScript	LLM Integration (OpenAI, Anthropic)	Technical Architecture & ADRs
React.js / Next.js	AI Agent Orchestration	Stakeholder Communication
Node.js / NestJS	Prompt Engineering & Optimisation	Mentoring & Team Growth
REST / GraphQL API Design	AI-Assisted UI Generation	Design Systems
Backend-for-Frontend (BFF)	Real-Time Data Pipelines	Domain-Driven Design
Docker / Containerisation	D3 / Data Visualisation	Regulated / Compliance-Aware Engineering
MongoDB / SQL		
ORM (Prisma / Drizzle)		

languages

German (Native) · English (CEFR C-level)

education

Berlin University of Applied Sciences (BHT)	2007 – 2011
Bachelor of Science, Computer Science	

work experience

Senior Software Engineer – DocMorris

Berlin, Germany | 08/2023 – Present

Digital healthcare and online pharmacy platform — German market leader.

- Architected and delivered a white-label platform migration; 3 brands onboarded to date across the full stack.
- Led AI agent initiatives across the engineering org — evaluated model providers, optimised token usage, reliability, and response predictability for production LLM-powered features.
- Designed and led a cross-platform Design System structured for AI-assisted UI generation, enabling rapid component creation via LLM prompting.
- Drove full-stack architecture evolution across frontend, BFF, and API layers in a regulated healthcare environment.
- Improved test coverage and accessibility compliance across the frontend codebase.
- Mentored 5 engineers; onboarded new hires and raised team capability in TypeScript, React, and AI-adjacent engineering practices.

Head of Engineering – Made2Flow

Berlin, Germany | 12/2022 – 07/2023

Sustainability platform for fashion supply-chain decision support.

- Designed a next-generation domain data model from scratch with the CPO, replacing a fragmented model insufficient to support product use cases.
- Built and led a team of 4 engineers, including hiring 2; owned technical partner communication and integration planning.
- Evaluated data pipeline and analytics architecture to support data-driven decision-support features.

Technical Lead – eHealth-Tec GmbH

Berlin, Germany | 04/2020 – 11/2022

Digital health products for patients, doctors, and pharmacists — regulated health-tech environment.

- Built and owned the full-stack frontend and BFF layers of a white-label online pharmacy platform serving 2 clients in production (TypeScript, React, Next.js, Node.js, NestJS).
- Designed Backend-for-Frontend layers as anti-corruption boundaries, shaping API contracts across the platform.
- Introduced a requirements-driven architecture process — ADRs, design reviews, and structured refinement.
- Led stakeholder communication and cross-functional alignment for a team of 4.
- Delivered a gematik-regulated browser-based e-prescription tool for physicians — navigating strict compliance and data privacy requirements.
- Mentored and onboarded engineers; grew team capability in full-stack architecture and testing.

Head of Engineering – Medtower UG

Berlin, Germany | 09/2018 – 04/2020

Software and hardware solutions for hospital operations and visibility.

- Owned architecture and development of a real-time IoT platform — microservices, SPA, and live device tracking (Node.js, React, TypeScript).
- Designed a multi-device real-time communication system using AMQP 1.0 and Apache Qpid for streaming device telemetry.
- Built 3D indoor maps with live device location and status visualisation in an offline environment (OpenMapTiles, D3).
- Led a team of 2 engineers; established requirements engineering, refinement process, and team knowledge base.
- Managed external Apache NiFi consultants for ETL data pipeline delivery.

earlier experience

Software Developer – remind me GmbH

02/2018 – 08/2018

Authored the technical concept for a white-label product transformation. Implemented feature-toggle architecture with lazy loading for flexible multi-context deployment. Mentored developers in a Kanban team of 5.

Software Developer – Cedavis Technology GmbH

08/2009 – 01/2018

Evolved full-stack architecture over 9 years — introduced Angular 1, then migrated to React and TypeScript. Built a custom D3 chart component library from scratch. Implemented data simulation and forecasting features for healthcare capacity planning. Engineered a PDF reporting module using Java Nashorn to render React components server-side — enabling a single shared codebase for live UI and PDF output.

certifications

iSAQB Certified Professional for Software Architecture – Foundation

05/2022

oose
