

TobiasBelch

TECHNICAL LEAD

[linkedin.com/in/tobias-belch](https://www.linkedin.com/in/tobias-belch) | Berlin, Germany

about

Hands-on technical leader with 17 years of experience owning architecture, writing production code, and shipping durable web platforms in healthcare, e-health commerce, and sustainability. Combines deep TypeScript, React, and Node.js expertise with end-to-end technical ownership — from concept through deployment and iteration. Proven record of translating business needs into actionable technical roadmaps, collaborating directly with stakeholders and clients, and leading small agile engineering teams. Actively explores AI integration and LLM-based capabilities to solve real product challenges.

skills

Technical Leadership

Architecture Ownership & Strategy
Stakeholder & Client Communication
Mentoring & Small Team Leadership
Engineering Process Design
Cross-Functional Alignment
End-to-End Delivery Ownership

Core Engineering

TypeScript / JavaScript
React.js / Next.js
Node.js / NestJS
Frontend & BFF Architecture
GraphQL / REST API Design
State Management (Redux)
Jest / Cypress / Playwright
LLM Integration / AI Agent

Supporting

Docker / Kubernetes / CI/CD
Material UI / Tailwind / SCSS
iSAQB SW Architecture (CPSA-F)
Domain-Driven Design

languages

German (Native) · English (CEFR C-level)

education

Berlin University of Applied Sciences (BHT)

2007 – 2011

Bachelor of Science, Computer Science

work experience

Senior Software Engineer – DocMorris

Berlin, Germany | 08/2023 – Present

Digital healthcare and online pharmacy platform in the German market.

- Architected a white-label pharmacy migration; 3 brands onboarded on a shared component and config layer — own technical design and delivery.
- Drove frontend and BFF architecture evolution, shaping API contracts and technical direction across teams.
- Led design and adoption of a cross-platform Design System, improving UX consistency, accessibility, and developer velocity; structured to support AI-assisted UI generation.
- Drove AI-agent research across the org — evaluated token usage, response predictability, and practical integration pathways.
- Trusted for direct stakeholder communication in critical and high-visibility situations.
- Improved test coverage and accessibility compliance across the frontend codebase.
- Mentored 5 engineers; onboarded new hires and raised team capability in TypeScript, React, and testing.

Head of Engineering – Made2Flow

Berlin, Germany | 12/2022 – 07/2023

Sustainability platform for fashion supply-chain decision support.

- Led core domain data model redesign with the CPO, replacing a fragmented model that blocked key product use cases.
- Built and led a team of 4 engineers, hiring 2 and establishing delivery processes from scratch.
- Owned technical partner communication, integration planning, and cross-team alignment.

Technical Lead – eHealth-Tec GmbH

Berlin, Germany | 04/2020 – 11/2022

Digital health products for patients, doctors, and pharmacists — regulated environment.

- Built and owned the frontend of a white-label pharmacy platform serving 2 production clients (TypeScript, React, Next.js).
- Designed BFF layers as anti-corruption boundaries, decoupling frontends from upstream service complexity (Node.js, NestJS, REST/GraphQL).
- Introduced ADRs, design reviews, and structured refinement — replacing ad-hoc decisions with a repeatable architecture process.
- Led stakeholder communication and cross-functional alignment for a team of 4 in an agile setup.
- Delivered a gematik-regulated browser-based e-prescription tool — security-by-design in a mission-critical context.
- Mentored and onboarded engineers; grew team capability in TypeScript, architecture, and testing practices.

Head of Engineering – Medtower UG

Berlin, Germany | 09/2018 – 04/2020

Software and hardware solutions for hospital operations and real-time visibility.

- Owned architecture of a real-time IoT platform — microservices, SPA, live device tracking (Node.js, React, TypeScript).
- Designed a multi-device real-time communication system connecting IoT hardware, servers, and browsers via AMQP 1.0 / Apache Qpid.
- Built 3D indoor multi-floor maps with live device location and status visualisation in an offline-capable environment (OpenMapTiles).
- Led a team of 2; established requirements engineering, refinement, and a team knowledge base.
- Managed external consultants for ETL pipeline delivery and integrated outputs into the dashboard layer.

earlier experience

Software Developer – remind me GmbH

02/2018 – 08/2018

Authored the technical concept for the white-label product transformation — adopted and shipped after tenure. Implemented feature-toggle architecture with lazy loading for multi-context deployment. Mentored junior and mid-level developers in a Kanban team of 5.

Software Developer – Cedavis Technology GmbH

08/2009 – 01/2018

Grew sole ownership of frontend architecture over 9 years — introduced Angular 1, then migrated to React and TypeScript as the stack matured. Built a custom D3 chart library for healthcare capacity-planning dashboards. Engineered a PDF reporting module using Java Nashorn to render React components server-side — single shared codebase for live UI and PDF output. Delivered data simulation and forecasting visualisation features.

certifications

iSAQB Certified Professional for Software Architecture – Foundation

05/2022
